

Letter of recommendation

19th July 2017

Electronic Alliance has work together with Prosurge Electronics and their Mother Company Hitech Electronic since 2002.

To my experience Prosurge Electronic is the most professional designer and manufacturer of surge protection products to any level of protection required.

Prosurge Electronic is one of the very few companies world wide offering a full capability of test equipment and engineers to confirm the parameters of all their surge designs and products, so you know that the product will do the job as specified.

The majority of Prosurge Electronics SPD's are certified to the lattes UL and KEMA standards.

Due to Prosurge's co-operation, great engineering design team, well equiped laboratory and modern production facilities, Electronic Alliance has been the sole supplier of all the surge protection products to EATON ELECTRIC Australia, since 2004, and todate we continue to supply Eaton Electric Australia with all their surge protection needs.

Just to name a few others, we also supplying companies like:

Natural Power Solutions
&
Power Shield

With their company branded surge filters in which they use for the protection of their UPS equipment.

Due to Prosurge Electronic modern and certified manufacturing facility, we have experience a well below average of failure rate on products received, and this has helped us to maintaining a long term business relationship with our most critical customers.
